

# Dri-Storm Window Protector

Dri-Storm window protector is the only recognised "over the window" storm guard of its type, readily available from stock. Dri-Storm prevents the direct penetration of rain water through the head of the window or top opening transom. It is normally fitted across the top of the window opening, directly to the brick work. Dri-Storm is also invaluable when fitted over door entrances, or to any abutment where water penetration is a problem.

## DESCRIPTION

Dri-Storm is manufactured in high quality aluminium and finished in brown or white polyester powder coating. Dri-Storm is supplied in 3 metre lengths and is readily affixed on site with silicone mastic and screws. Variations are readily manufactured upon request.

## PRICE

£7.95  
per meter
