

HV102/103 Ozone Generators Air and Water

The latest design in our product range, the HV102/103 are fully automatic ozone generators capable of sterilising in both air and water phase. Portable or wall mountable, the units produce 125/250 mg / hr of ozone. For air applications, it is as simple as switching on the unit and choosing the required time setting. These are 5, 10, 15, 30 and 60-minute intervals or continuous production.

Included is a diffusion hose for use in water. By simply attaching the hose to the ozone outlet and feeding into a volume of water, the amount of ozone required is chosen by the timer displays on the front of the generator. The HV102/103 is ideal for private home usage, and in facilities such as nursing homes, hospitals, retail outlets and restaurants. Ideal for boats to freshen up stoned drinking water.

DZ45 Specifications

Power 220-240 Volts

Rated Flow 2.5 litres per minute

Ozone Production 125/250 mg / hr

Outer Size (LxWxH) 300x200x115mm

Operating Temperature 0°C-40°C

Weight 2.4kg

Average Consumption 0.15A

Special Features CE approved
