

# Dri-Cover

## CONCRETE WINDOW SILL COVER AND PROTECTOR

'Dri-Cover' has been specifically designed to combat the dangerous breaking down of concrete sills and ledges, especially on higher rise buildings.

Where the deterioration of the concrete has only recently commenced, the fitting of 'Dri-Cover' will contain and protect the cill. Where the break down is past containing, 'Dri-Cover' makes the ideal replacement sill just as it is, or filled with polyurethane foam. 'Dri-Cover' may also be used on wooden cills, and in all cases, is easy to fit either with the upstand screwed and sealed with mastic to the bottom of the frame, or with the upstand flattened and inserted under the frame.

Supplied in highest quality, powder coated aluminium and made by order to suit your requirements.

Welded end stops can also be provided

PRICE  
on application
